Leading in sustainability

Since 2003, Renew's International Projects Group has installed thousands of solar power systems across Timor-Leste.

With these systems families have access to electricity at home for the first time. Children can read at night and parents can be productive after hours. These systems help to empower Timor-Leste's poorest rural communities.

Our programs also build capacity. Our training programs ensure local technicians have the skills and experience to continue installation work in their own communities. Thank you for helping us to continue the roll-out of clean green energy across Timor-Leste.

Your donation helps to ensure the continued work of Renew volunteers and professionals in Timor-Leste.

Thank you for your support!
